

# Omni - flowchart

# Unreal Engine

All People can visit the main auditorium which shows some paintings and an interface to visit artists' galleries.

When you select that artist, the system asks.

walking as

Request artist credentials

If the credentials and the selected artist are the same.

If the credentials are not the same as the artist selected to visit.

The system gets from the database

The configuration imposed by the artist in his gallery and the paintings available.

The system provides only control, to walk through the gallery, see the paintings, read information about the paintings, and press the button:

Buy

Return

Exit

It leads directly to the purchase in Omni of said painting.

Return to the  
main  
auditorium

Leads the web page on Omni, of the currently visited artist.

The system provides control to the artist to set the color of the walls, the color of the lights, the type of floor and the placement of the pictures.

## The artist saves changes

The database updates. Design gallery and paintings available.

Main auditorium

All People can visit the main auditorium which shows some paintings and an interface to visit artists' galleries.

3. The Main Auditorium shows the ART CENTRAL GALLERY art. It will show the first work of art for each of the collections (about 20 works of art).

URL: <https://omnipresenti.com>

2. A user can enter the OMNIVERSE by either going to <https://omnipresenti.com> and clicking WALKIN or by going to <https://omniartcentral.com>.

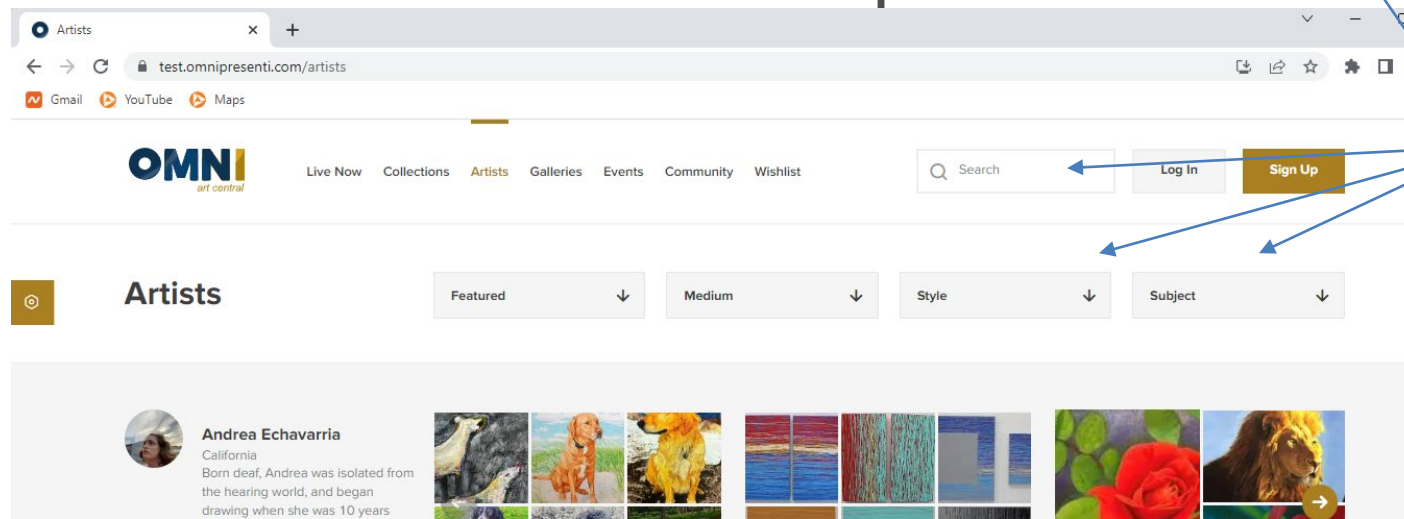

1. Only show the ART CENTRAL GALLERY prerecorded video in the landing page (eliminate showing other spaces prerecorded videos)

The visitor can press the painting of an artist, which shows information about the painting and the artist, and in turn a button to visit the complete gallery of said artist.

Also the visitor can select from the gallery gallery, which artist wishes to visit the complete gallery of said artist.

When you select that artist, the system asks.

1. Since we already have about 80 artists and expect to increase it to many thousands of artists, a list is not practical. I suggest we give/integrate a search function and a filter function on the OMNI database, which we already have in OMNI.
