Unreal Engine

URL: <https://omniartcentral.com>

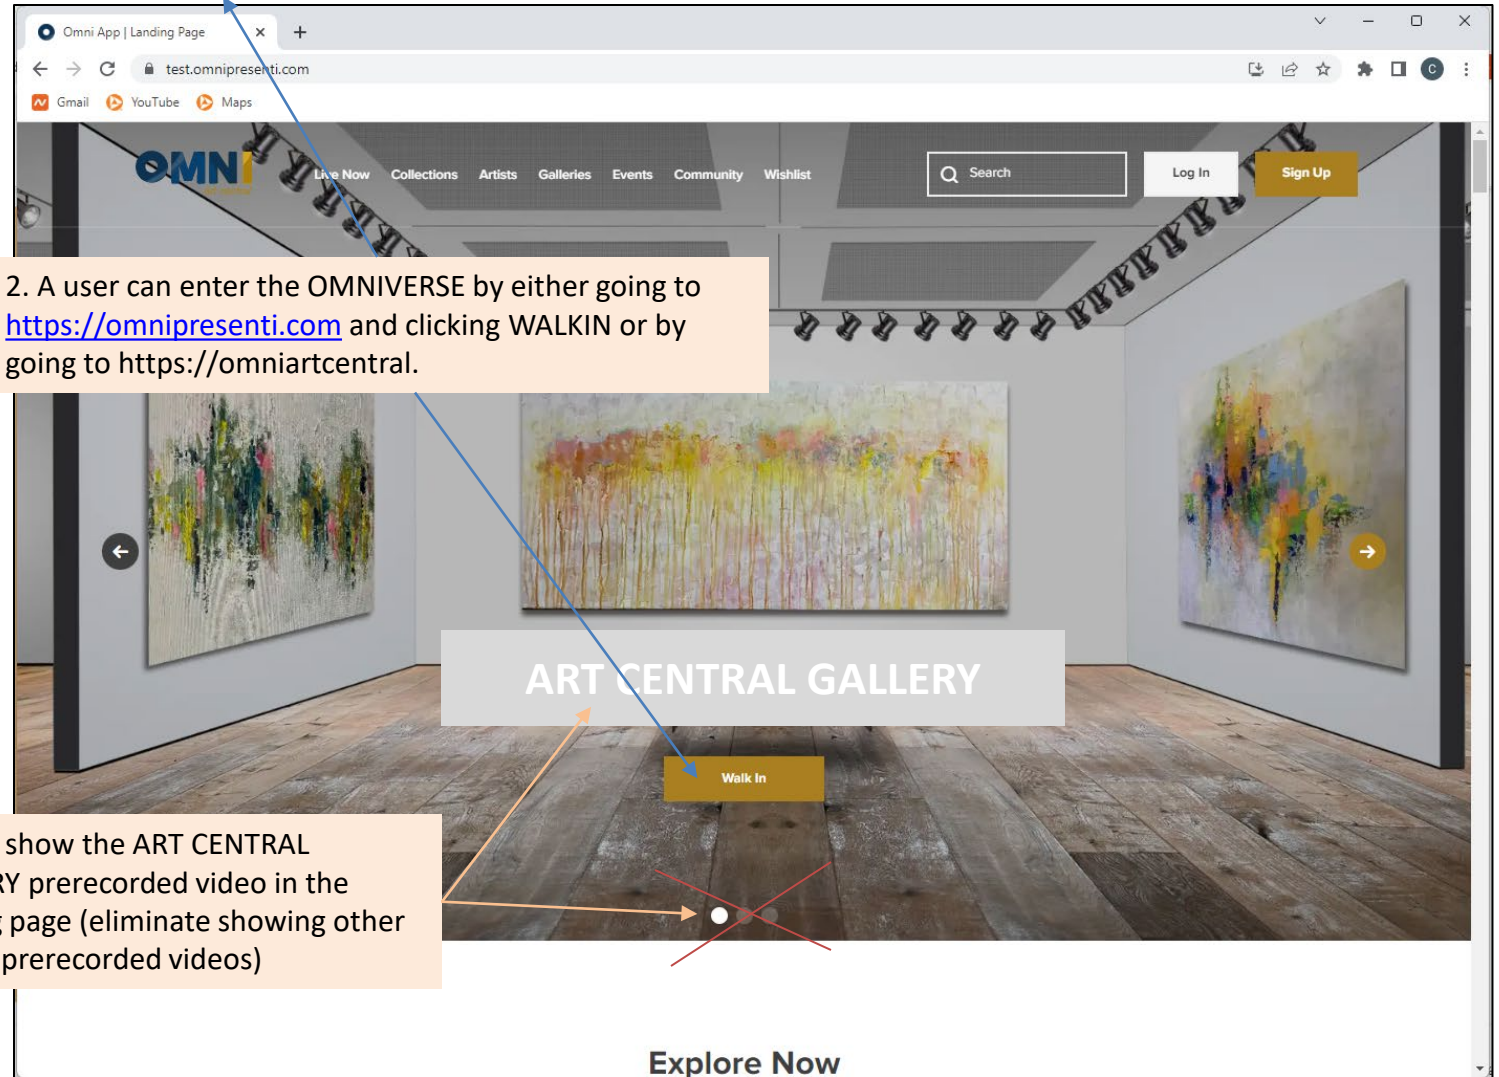

Main auditorium

All People can visit the main auditorium which shows some paintings and an interface to visit artists' galleries.

3. The Main Auditorium shows the ART CENTRAL GALLERY art. It will show the first work of art for each of the collections (about 20 works of art).

URL: <https://omnipresenti.com>

2. A user can enter the OMNIVERSE by either going to <https://omnipresenti.com> and clicking WALKIN or by going to <https://omniartcentral.com>.

1. Only show the ART CENTRAL GALLERY prerecorded video in the landing page (eliminate showing other spaces prerecorded videos)

ART CENTRAL GALLERY

Walk In

Explore Now

The visitor can press the painting of an artist, which shows information about the painting and the artist, and in turn a button to visit the complete gallery of said artist.

Also the visitor can select from the gallery gallery, which artist wishes to visit the complete gallery of said artist.

When you select that artist, the system asks.

1. Since we already have about 80 artists and expect to increase it to many thousands of artists, a list is not practical. I suggest we give/integrate a search function and a filter function on the OMNI database, which we already have in OMNI.
